Mr. Mason,

Please accept my letter of application for the position of Web Developer Intern at Beyond the Scores. I beirfly meet with you at the Kansas State Career Fair and was interested about the owrk your company does. From your description of projects that Beyond the Scores are working on, I am confdent that my skills will be put to use and be benificial at your company.

While persuing my undergraduate degree at K-State I found my passion for Web Development. I have taken courses that have futhered my skills in Web Development such as Web Interface Design and Database System Concepts. Also from these courses I have gained experience in multiple frameworks including ASP.NET MVC4 and Django. From these courses I have developed a solid base of skills for web development that I can work with and expand upon.

In addition to taking courses a K-State I have had the opprotunity to further my skills through jobs and internships. I have held an internship with K-State where I developed a website from sratch for the Biology department using ASP.NET MVC4 framwork. From this I learned about many tools that allow web sites to be built quickly and gained experience developing a web site to meet customer standards. Also I saw why certain design patterns, such as the Model View Control pattern, are used in web development and their advantages in a long term project.

With the skills that I have and my drive to always improve and expaned them, I believe that I have what your comapny needs. Thank you for considering my application. I will be following up with you in the comming week. I look forward to speaking with you again.

Best regards,

Devin Kelly-Collins
